

# Healthcare for Government

## Federal, State and Local Government

Providing a 'glue' to connect multiple systems

### Collaboration & integration with process perspective

Federal, State and Local Government agencies face increasing pressure to improve their efficiency and accountability, collaborate across departments, lower operating costs, comply with regulations and standards, and provide constituents with better service. In order to meet these demands, government agencies need to integrate information and processes from multiple systems, organizations and data types. Santeon's proven Business Process Management technology provides a 'glue' to connect systems and people with the information they need without disruption to existing systems and regardless of the type of system. Santeon provides this capability for Government at significantly lower costs than traditional integration and providing significantly additional flexibility in the integration. Using Santeon's BPM platform, Government organizations can improve interoperability of productivity in numerous ways:

- Proactively manage and improve flow of information and processes seamlessly across organizations
- Tie information from disparate systems together quickly and without disruption to the existing systems
- Automate manual paper based processes and provide human oversight and interaction within the automation
- Coordinate work across multiple departments
- Increase oversight helping with management, budgeting, resource allocation and audit trail for compliance
- Provide constituents with Internet based access to important information and services
- Improve data quality and reduce errors
- Provide system wide reporting services
- Accelerate decision making and the ability to quickly change processes
- Increase collaboration across business staff, IT and leadership

## Transforming Federal, State and Local Government

**Santeon's innovation leverages & extends your technology?** Santeon understands that most government agencies have made significant investments in multiple applications. These applications have been built over time and do not always work well with each other. Santeon's innovative approach helps access data from these different applications in centralized intelligent views without having to disrupt or replace the existing systems. We can also help you create streamlined processes to standardize how this information is efficiently processed. Regardless of the data type, Santeon can pull data into Intelligent Forms for interaction. Santeon's BPM handles documentation intensive forms processing, including budgeting, HR, procurement, approvals, financial billing and tracking, HIPAA, and others. With hundreds of systems and databases, Government needs quick access to information from different systems. Santeon's BPM can proactively manage the exchange and processes of needed information.

Santeon capabilities to transform governmental agencies? Santeon helps transform government fast and efficiently. Santeon's technology can help your organization increase revenue and efficiency via:

- Workflow & automation
- Integration to exchange data across multiple systems in one centralized location
- Process Modeling and Simulation
- Intelligent Forms
- Dynamic Business Rules Management to rapidly modify rules
- Collaboration portal
- Support for any data format and system platform
- Business and technical views to speed deployment
