

Helping organization quickly make healthcare information secure

**The best way to manage HIPAA security mandates is to break them down into clear, manageable tasks**

### Security Analysis & Remediation Compliance Framework Portal

Actis HIPAA Secure™ assists organizations comply with HIPAA Security requirements through a web-based compliance framework portal that covers the life-cycle of security analysis and remediation. HIPAA security requirements are organized into administrative, technical and physical areas. The regulations are very comprehensive and require organizations to review and improve their policies and processes in numerous areas such as password management, data management, workforce termination procedures, access authorization, and encryption.

*Your security doesn't need to be like Fort-Knox, but it will require most organizations to adopt new policies and procedures to protect health data.*

Additionally, HIPAA regulation requires thorough documentation. Using Actis HIPAA Secure™ you can assess and understand your compliance needs, as well as develop and document a security program to safeguard all public health information.

### Reduce time & cost to comply with HIPAA Security requirements

Actis HIPAA Secure™ is designed specifically to support your organization in the complete life-cycle of HIPAA security compliance. Santéon offers numerous capabilities to ensure short-term impact and long-term results.

#### Benefits

- Reduce time to comply
- Reduce cost to comply
- Increase security of patient health information across your organization
- Improve security policies and implementation
- Train staff on compliance requirements
- Standardize security policies
- Document policies, procedures and compliance activities

- Identify security gaps, using a self-assessment style questionnaire
- Analyze, categorize and provide guidance on what you need to do to be secure and compliant
- Manage and track security requirements and compliance with project workflow and notifications
- Develop or use pre-packaged security policies
- Implement administrative, physical and technical controls
- Access security knowledge center to better understand regulations
- Train staff in security awareness and requirements
- Monitor the on-going security process
- Work with Santéon consultants for quick review and remediation of technical or physical requirements questions

***Reduce time, cost and complexity to comply... starting with a self-audit***

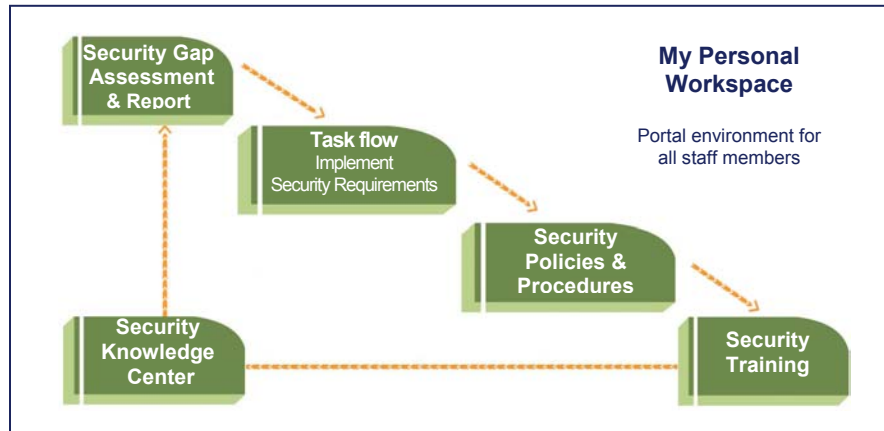

**HIPAA is intended to increase efficiency and reduce costs which can be accomplished with a process efficiency approach**

### Security compliance for quick results & long-term efficiency

The Actis compliance framework is a web-based portal that can be used by employees across your organization. It is pre-populated with security questions for 'self-assessment' or can be used by consultants to provide insight on compliance gaps. Actis HIPAA Secure™ comes with pre-packaged Best Practice Security Plans to speed up your time to comply. Santéon HIPAA security experts can supplement your efforts by providing quick consulting on physical and technical security, and advising you on cost-effective remediation steps. The portal can then serve as a knowledge center, document and policy management center, and on-going auditable record of your compliance efforts, as well as act as your single source for Security Training using many of our Security Lessons. Additionally, the Actis Training Module provides automatic management and tracking of individual training required by law.

Actis HIPAA Secure™ has several integrated modules in a web-based portal to assist your organization through the entire life-cycle of assessment and remediation of your security. The solution can be customized to your organization's needs, if desired.
